

ENVIRONMENTAL POLICY

Bunting Magnetics Europe Limited Berkhamsted manufactures and distributes permanent magnets against its own and customer's specifications. The Company recognises it has a responsibility to improve the environment and has provided the necessary resources to implement the requirements of international standard ISO14001.

The company works closely with its approved suppliers and sub-contractors with a long-term aim of providing product, which can be recycled when no longer fit for purpose. Raw material purchased is assessed for environmental effects with regards to suppliers manufacturing processes and where possible, will be reworked or reprocessed rather than allocated for disposal. The environmental impact of supplied products are assessed and monitored. When new technologies are introduced, if found acceptable, they are adopted by the environmental control documentation.

The company has a commitment to meet or exceed legal, regulatory or other requirements which impact on our business, striving for continuous improvement while minimising the creation of waste and pollution. Energy use is monitored and kept to the minimum while looking at new ways of implementing efficiencies. The premises and land under the control of the company are maintained to limit any waste being transmitted or received from surrounding areas.

Significant environmental aspects with set objectives are maintained, covering: office administration, magnet manufacture, magnetising, painting, storage distribution and transport to provide the most effective method of operation in reducing pollution and waste. Personnel have been trained in environment issues, first aid, and health and safety requirements applicable to their working conditions.
