

Cartridge Magnets

Determine the right size and magnet strength for your application.

Cartridges intended for use in hoppers or similar applications should be arranged in multi-cartridge arrays and mounted high enough to cover twice the discharge opening area, so as not to restrict product flow.

We recommend that you consult a Bunting sales engineer to select the magnetic material that is best suited to the materials, flow rates, and types of ferrous contaminants you encounter. Then find the corresponding part number from the table.

Ordering Information

Part numbers for cartridges are divided into three parts. The first denotes the cartridge type. The second two-digit part gives the cartridge length in inches. The third denotes the magnetic material. Specify end option when ordering.

Part Number Explanation

Type

C40 = Standard cartridges
25mm in diameter

HC50 = Heavy-duty cartridges
38mm square

Size

04 = 100mm length

08 = 200mm length

10 = 250mm length

18 = 450mm length

Magnetic Material

CR = Ceramic

AL = Alnico (not available in Heavy-Duty Cartridges)

NPB = Neodymium Power-Balanced™ Rare Earth material

NHI = Neodymium High-Intensity Rare Earth material for the most demanding applications (not available in Heavy-Duty Cartridges)

Standard and Heavy Duty Cartridges

Length of Cartridge in mm
